EXPERIENCE

SERVER TECHNICIAN
Jan 2021 - Oct 2021

Cokeva Inc.

- Implemented JIRA-based automated ticketing system, optimizing warranty claim processing.
- Conducted detailed testing and failure analysis for efficient product refurbishment.
- Established and maintained strong client relationships with 5 major technology companies.

PROJECTS

THREE-DEA

App Academy Hackathon   Live | Github

- Effectively managed rendering processes for essential data elements using React.js and Three.js, creating immersive 3D interfaces.
- Led integration of the Stripe payment processing API for seamless transactions.

MUSICSTRATUS

Solo   Live | Github

- Implemented a React-based music player, utilizing Express (Node.js) for backend functionalities.
- Employed AWS S3 for secure storage of user-uploaded tracks, ensuring high availability and global accessibility with stringent security standards.

PETSAGRAM

Team of 4   Live | Github

- Enhanced user experience with AWS-enabled photo upload features. Introduced a many-to-many table for connecting users with shared interests, fostering genuine relationships.
- Crafted a logic system with a "Public Feed" and "Following" function, providing users with curated content and a personalized experience.
